

ABSTRAKT

Name: Education of children with autistic spectre malfunction in the Middle Bohemian region.

Goals: To provide summary of autism problematics, connected with opportunity of education in the Middle Bohemian region. To find out numer of patients with Autistic spectre malfunction (ASM) in pedagogico-psychological advisory centres (PPAC) in the Middle Bohemian region. To monitorize all institutes in the region intergating clients in group or individual way. To verify efectiveness of integrating in each institution of the region.

Method: For fullfiling of these goals there were created quaequestionnaires by author of this project. There is 13 PPACs and 20 education centres involved in the quationnaire investigation. Furthermore, there was accomplished additional investigation at the form of interview in the families containing

Conclusion: There is 22% increase of clients with ASM in the Middle Bohemian region at the years 2000-2008. In the year 2008 clients with ASM are visiting 54 educational centres and the method of educating is mostly individual. In the Middle Bohemian region the effectiveness of integration is considered for successful. Families of the clients consider educating for sufficient, however point out a low numer of options when choosing the school.
